

# Finance Reconciliation: Bridge the gap between disparate systems and data accuracy

Automate multi-source financial reconciliation with AI-powered exception resolution

## THE CHALLENGE

Finance and data teams struggle with fragmented, manual reconciliation processes across disparate systems that lack dynamic configuration, resulting in data inconsistencies, prolonged validation cycles, and increased risk of financial reporting errors.

## OUR SOLUTION

Enterprise-ready, configuration-driven reconciliation platform that automates financial data validation using a dynamic database engine. Proactively closes reconciliation gaps in complex multi-source revenue and booking workflows.

## Financial Automation Capabilities

1 Multi-Source Reconciliation

3 Enterprise Audit Trails

2 AI Exception Resolution

4 Configuration-Driven Validation

## What Sets It Apart

 Dynamic queries with full auditability and traceability

 Works seamlessly on Snowflake, SQL Server, and enterprise DWH

 Combines billing data, business rules, and historical insights

 Traceable outputs with human validation for finance confidence

## Value Delivered

### Finance Teams

99.9% accuracy in cross-system validation

### CFO/Leadership

Comprehensive audit trails and real-time revenue integrity visibility

### Billing Operations

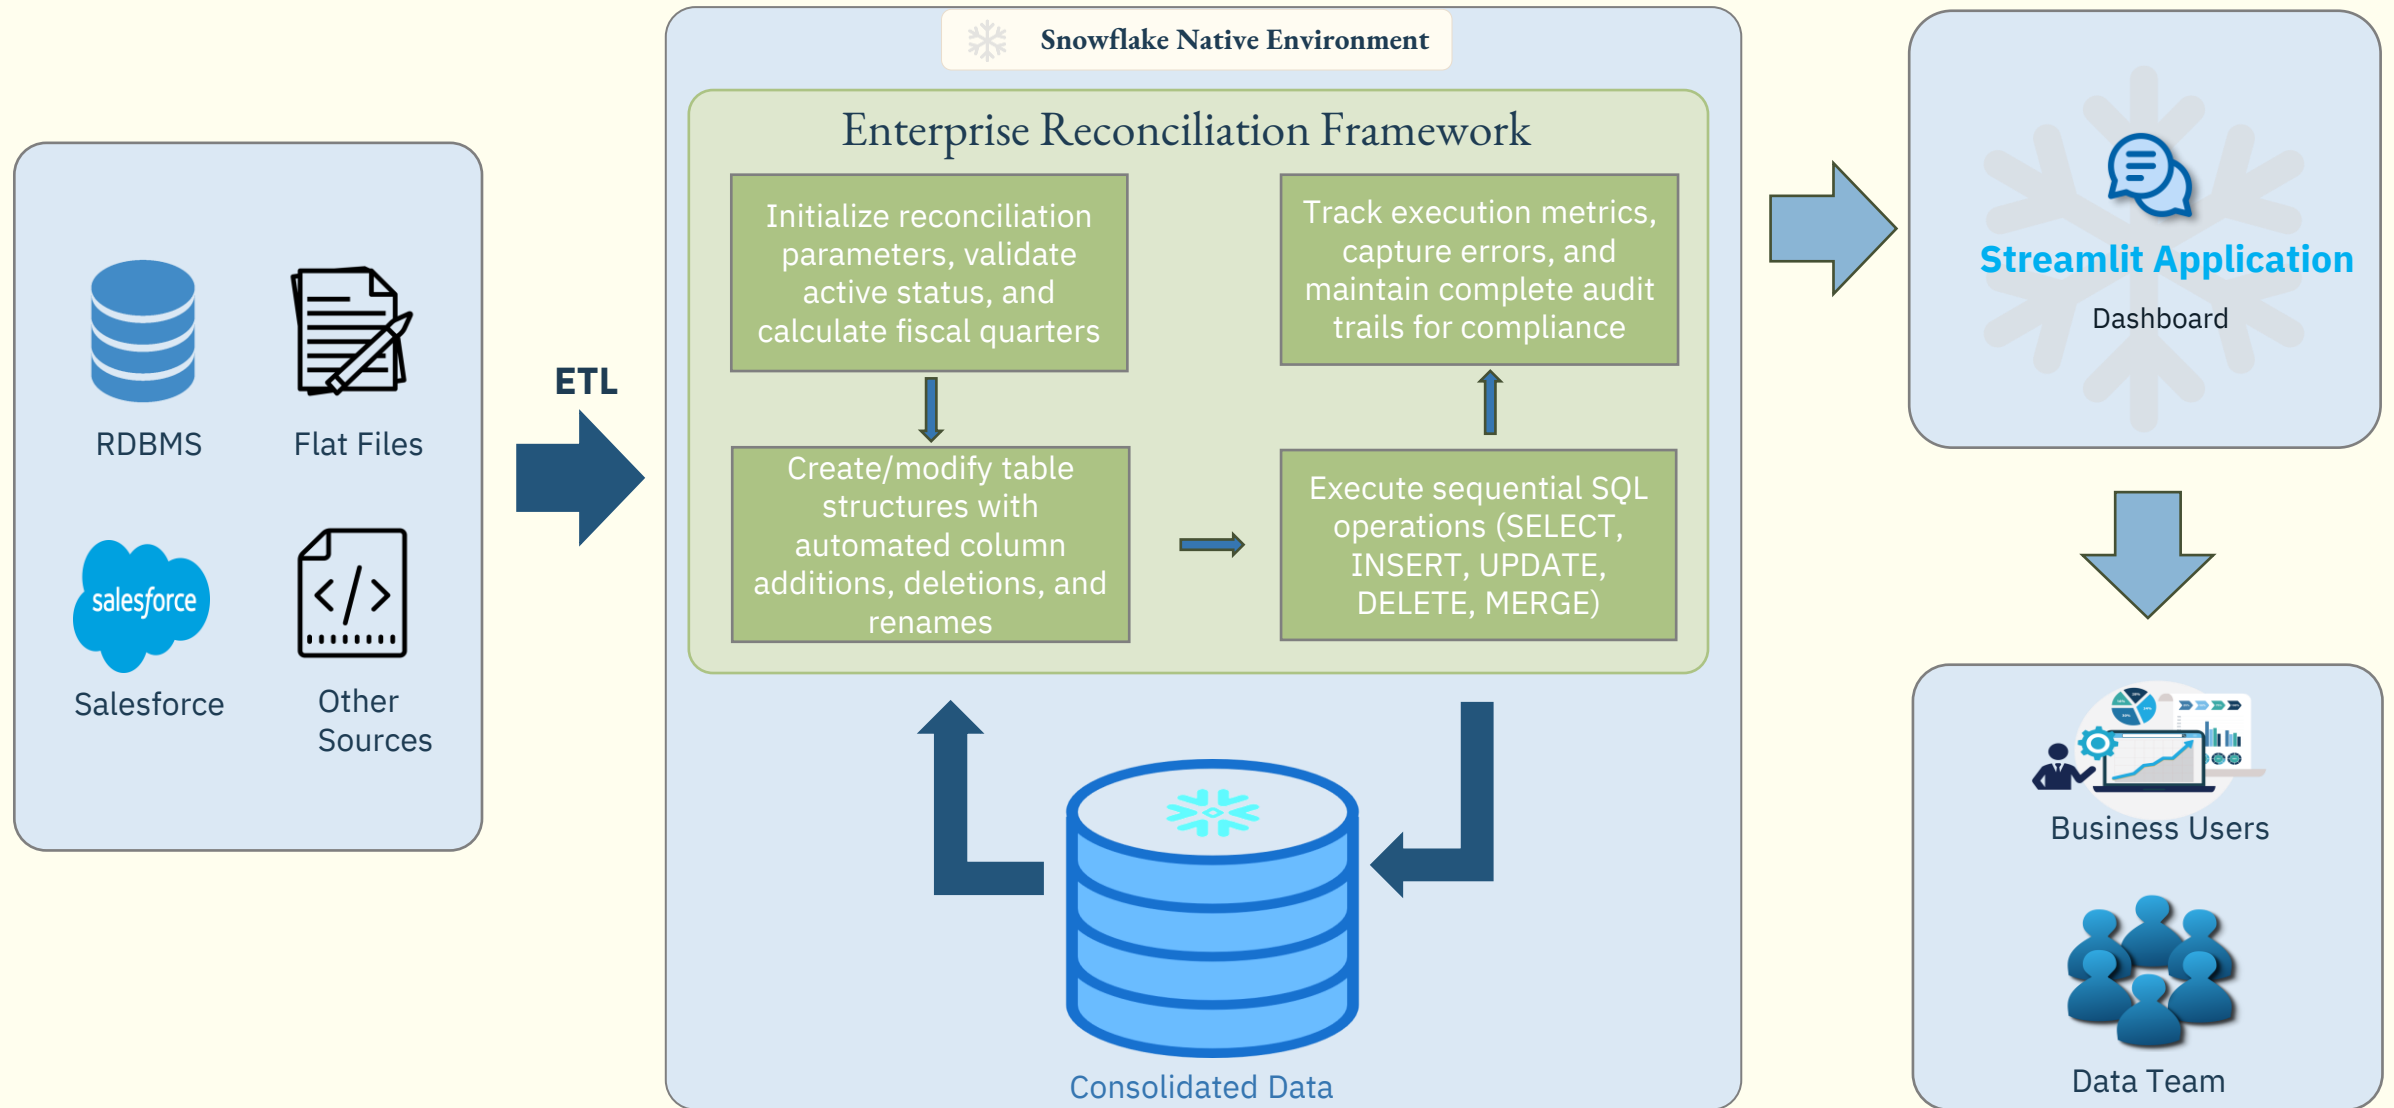

Immutable audit trails with automated validation workflows

### Revenue Officers

Real-time data validation with configurable reporting frameworks
